## FORCE PROTECTION SYSTEMS

### Defencell™ Protection Wall Systems: A new approach for firing ranges

Defencell™ is the next generation of structures for firing ranges. It brings proven performance to firing ranges with limited concern of ricochet hazard. Defencell™ is a unique three dimensional fabric based confinement system made of heavy duty geotextile. When filled with sand or other suitable material, Defencell™ becomes a effective backstop reducing the risk of ricochet hazards.

The Defencell™ system is modular and allows for many different configurations from range wall back stops to dividing walls to firing positions.

### Reduction in ricochet hazard

The vertical face that Defencell firing range wall provides offers a superior surface to reduce the amount of ricochet hazards.

This unique construction allows ranges to reduce danger zones and provide more area of useful range.

Defencell™ has been independently tested to contain rounds typically fired on civilian ranges to 25 mm APDS.

### Dividing walls

### Wall berms

### Obstacles

- >> Cost Effective — cheaper than the conventional 3:1 sloped berm.
- >> Reduced Ricochet — offers a vertical surface that reduces ricochet hazards.
- >> Repairable — due to its honeycomb design, repairs are quick and efficient.
- >> Configurable — can be formed to uneven surfaces and configured to form any structure.
- >> Durable — able to withstand many rounds before needing repair.
- >> Containment — due to its unique design, Defencell provides containment for spent rounds.
